

The Home Gene-Splicing Kit®

It's The Crazy New Way To Mix DNA!

- Award-Winning Software that is Fun for the Whole Family
- Mix & Match Faces of Friends, Family, and Pets
- Use Your Own Pictures, or Choose From Supplied "Gene Donors"
- Create Trading Cards, Postcards, Stickers, Magnets, and More
- Great with Digital Cameras
- For Windows 95/98/2000/me/xp and Macintosh systems 7 to 9

The easy-to-use gene-splicing lab is filled with hilarious animation and sound effects.

The main screen features the Gene-Splicing Machine.

Save your mutants in the cool comfort of the Cryogenic Freezer.

Import your own pictures and become a gene donor!

You'll Laugh Out Loud!

How would your smile look on a groundhog? Or, what about Fido with dad's nose and Aunt Esters' eyes? With *The Home Gene-Splicing Kit* you can mix and match faces from a wide variety of gene donors to make your own breed of hilarious mutants. Add pictures of yourself, friends, family, even your pets. Then combine them to make the craziest characters you have ever seen!

Tons of Funny Faces!

Millions of face combinations are possible. Fifty-six faces are included, so you can start gene-splicing even without a digital camera or scanner. More faces

can easily be added with downloadable Gene Donor Packs." As long as there's a new face out there, there's a new mutant possibility!

Create, Collect, and Trade!

Start your own collection of outrageous creatures. Use your crazy mug shots in other programs or attach them to emails and surprise your friends. There are many print layouts to choose from. Write about your creations in the Lab Book or The Dominant Gene" tabloid newspaper. Kids can spend hours making up stories about their mutants.

This creativity software is fun for ages seven and up. Great for family get-togethers!

There are dozens of print options available — trading cards, ID cards, stickers, postcards and much more! Change frame styles, border colors, and formats — all with the simple click of a button.

The Home Gene-Splicing Kit®

What the Press is Saying:

Overall, this is probably 1999's best kid's software program. The program features outstanding graphics, animations and sound effects. You'll enjoy the immersive environment of a virtual, albeit mad, laboratory!"

-Rocketdownload

"While the world debates the ethical issues, create your own genetic masterpieces with *The Home Gene-Splicing Kit.*"
-PC Magazine

For sheer amusement, I'd recommend You-Betcha Interactives *Home Gene-Splicing Kit*, a wacky program that lets kids blend human and animal photographs, with hilarious results."

-Forbes

Mad scientists will be satisfied by You-Betcha's mutant maker."

-Boston Herald

"It's so simple, it's brilliant."
-New York Post

For pure silliness, older kids will love mixing and matching the hundreds of facial features on You-Betcha Interactive's *Home Gene-Splicing Kit*. With a digital camera or scanner, you can use your own genes to make even more mutants."

-Parents Magazine

The fun takes place in a flickering, buzzing lab full of machinery, where you select your gene donors and the facial features you wish to blend; you can now, for example, not only accuse your

little brother of being a groundhog but also show what he'd look like if he actually were one.

-Family Fun Magazine

Its fun. And its creative. And anyone who can click a mouse can use this gene-splicer to create and print out one heck of a party favor."

-Washington Post

Educational? You-Betcha!

Fun and creative play sparks interest and imagination. Children are quickly engaged in the process of making funny, real looking creatures. They are further inspired to write about their creations in many of the programs printable activities, such as the lab book. Parents and teachers will appreciate these creative writing components.

Here are some inventive ways that teachers have used the program in their classrooms:

- o Short stories, biographies, and wanted posters
- o Foreign language writing assignments
- o Multi-media projects
- o Goofy yearbook entries
- o Multi-cultural awareness week projects
- o Cross-age tutoring program
- o Basic computer skills and lessons in using multiple programs (importing/exporting, etc.)
- o Funny family trees

Program Details:

To import your own pictures for use as Gene Donors, you will need a digitized image from a digital camera or scanner (not included). There are 56 faces included with the program (making over 9 million face combinations possible), so you can start splicing even without any additional hardware. By adding your own pictures, the combinations are limitless. Additional faces, called Gene Donor Packs, may be purchased separately online at www.genesplicing.com.

Picture Import File Formats: *The Home Gene-Splicing Kit* will import the following file formats: .bmp, .pict, .tiff, .gif, .jpeg, .tga.

Export File Formats: Windows: .bmp file
Macintosh: .pict file
Gene Donor and Mutant images are saved at 170 x 170 pixels.

Printing: Many of the print options, such as stickers, postcards, and name tags, are formatted for various Avery® brand self-adhesive stickers and pre-scored paper products (not included). All printing can also be done on any standard paper that is compatible with your printer.

System Requirements:

Windows 95 / 98 / 2000 / me / XP: PC with Pentium Processor or faster, 16 bit color (True Color recommended), 32 MB Ram or greater, 75 MB of hard disk space, Soundblaster compatible, 4X CD-ROM drive.

Macintosh: Power PC with system 7.5.1 to 9.2, (not OSX compatible) thousands or millions of colors, 16 MB of available Ram, 75 MB of hard disk space, 4X CD-ROM drive.
